WRIGHT-PATTERSON AFB VS
CHRONOLOGICAL RECORD OF MEDICAL CARE
Medical Record

Findings Associated with Image
[1] Other Abnormal Finding, Specify : Thoracic Antebrachial Lt Top, (bronzing from elbow to carpus)
[2] Other Abnormal Finding, Specify : Pelvic Metatarsal Left Bottom, (bronzing of fur with localized alopecia with thickened erythematous skin with serous discharge, some crusting)

Male Genitalia: NORMAL - no discharge; no masses, cysts, or lesions; normal male genitalia
Anus and Rectum: NOT PERFORMED
Locomotion: NORMAL - ambulatory x 4; gait normal; no evidence of lameness
Other Physical Exam (Male) Comments: LNs WNL
BCS 5/9

- Assessment:**
- Acral lick granuloma
 - Anxiety
 - Hot spots (dorsal LH paw/tarsus)

DDx: anxiety vs allergy

Discussed Apoquel trial vs Cytopoint to rule out allergic itch. O elects cytopoint at this time.
Gave Cytopoint 30mg. If licking does not improve, that suggests that the licking is behavioral. Consider working with trainer to improve confidence.

- Plan:**
- Procedures/Services Performed:
- Re-check Examination
 - Administer Injectable Medication
 - Cytopoint Injection 30mg/vial (Dose: 30mg; Subcutaneous, Shoulder, Left)

Drug Therapy:
Prescription written for Gentamicin-Betamethasone Topical Spray 120ml (Apply topically to affected area of skin every 12 hours for 14 days. This medication contains a steroid - wash hands after use., Quantity: 1 Bottle(s), No Refills)

Teaching/Counseling Text:
Your pet has been prescribed a prescription medication. Federal law restricts this drug to use by or on the order of a licensed veterinarian. To prescribe this medication, your pet needs to be seen by the veterinarian here to establish the valid veterinarian-client-patient relationship required to comply with this law.

Follow-up:
No follow-up required.

Other Plans:
Recommend starting Purina Calming Care probiotic.
Owner verbalized or demonstrated understanding of the above counseling or education and plan.

alleviate anxiety and boredom.

Other Options:
Pheromones - Products such as Adaptil (for dogs) and Feliway (for cats) work by emitting odorless calming messages in the air. Typically multiple diffusers placed around the home will support the best result.

Nutraceuticals - Purina Calming Care: This once-daily probiotic works by interacting with the gut-brain axis to moderate calm behavior. It is an over-the-counter supplement that also has the NASC Quality Seal.
Owner verbalized or demonstrated understanding of the above counseling or education and plan.

- Bordetella Vaccination, Intraoral
- Lepto-4 Vaccination Annual

Orders:

Labs: Heartworm/Ehrlichia/Lyme/Anaplasma Test In House

Drug Therapy:

Prescription written for Ivermectin/Pyrantel (Heartgard+) Chew Green 26-50lb K9 136mcg 1 dose (Administer 1 chew tab orally once monthly for the prevention of heartworm disease and control of internal parasites., Duration: 1 year(s), Quantity: 6 Dose(s), Refills: 1)
Prescription written for Fluralaner (Bravecto) Chew Green 22.1-44lb K9 500mg 1 dose (Give 1 chewable every 3 months for the prevention of fleas and ticks., Duration: 1 year(s), Quantity: 2 Dose(s), Refills: 1)
Prescription written for Doxycycline Capsules 100mg 50ct (Give 2 capsules by mouth once daily until gone., Quantity: 60 Capsule(s), No Refills)

Heartworm Prevention Status:

- Prescribed Heartworm Prevention today

Teaching/Counseling Text:

Because your pet was vaccinated today, you should monitor her/him closely over the next 24-48 hours. These vaccines sometimes cause adverse reactions. Normal reactions may include a decreased appetite, mild vomiting, and decreased activity. If you think your pet is experiencing a serious reaction (facial swelling, severe vomiting and diarrhea), contact a veterinarian immediately. If this occurs outside of our normal office hours, you may have to consult a civilian veterinarian.

Your pet has been prescribed a prescription medication. Federal law restricts this drug to use by or on the order of a licensed veterinarian. To prescribe this medication, your pet needs to be seen by the veterinarian here to establish the valid veterinarian-client-patient relationship required to comply with this law.

Follow-up:

No follow-up required.

Other Plans:

Discussed Lyme positive test result. Sent home Plumb's Standards client handout "Lyme Disease". Berkley will most likely test positive for Lyme in the future. The test does not indicate an active infection.

We recommend the use of dental products that have earned the VOHC seal of approval. These recommended products are tested by veterinary dentists and are shown to reduce calculus build up and improve oral health. A white VOHC seal is often visible on these recommended product's packaging.

Please visit <https://vohc.org/> to learn more and see recommended products.

Decrease food to 1/2 cup twice daily.

Berkely will probably need a dental cleaning next year!
Owner verbalized or demonstrated understanding of the above counseling or education and plan.

Labs: JPC Biopsy

Follow-up:

Lab Results Pending.
Follow-up required.
pending JPC results

Other Plans:

JPC Readout for Mass - PENDING. Results typically take 4-6 weeks depending on caseload, holidays, and personnel availability.

Post-Operative Instructions for your pet's neuter + mass removal.

Your pet's neuter today went well without complications!

WHAT TO EXPECT WHEN YOU BRING YOUR PET HOME

We strongly recommend you keep your pet confined in a crate or small room the night after surgery.
Your pet may be groggy when you get home, experiencing a "hang-over" from the anesthesia. Dogs will typically require 18-24 hours to recover from the general anesthesia. Most animals will be back to normal when the anesthesia leaves their system entirely.
Your pet may sleep much more than normal for 18-24 hours following surgery.
Your pet may temporarily have poor balance. This will make climbing stairs or getting in and out of the car more difficult than usual, so be ready to assist. Help your pet in and out of the car as sudden movements can damage his stitches. Lift your pet by wrapping your arms around him chest/front legs and rear/back legs.

INCISION SITE

What you see on the day of surgery is what we consider normal. There should be no drainage. A very small amount of redness/swelling at the incision site may occur.
Please check your pet's incision site once to twice daily for one week. Check for excessive redness, swelling, discharge, blood or opening of the incision.

SUTURES

Your pet does not have external sutures to be removed because his sutures are absorbable on the inside of skin. However, please be sure to keep your pet from licking or chewing at his incision site, as this can still cause the sutures to come apart.

FEEDING

Anesthesia tends to make animals experience nausea, so your pet may not want to eat when he gets home after surgery.

Chief Complaint: 8 month-old male Australian Shepherd (Mixed) presents for Sick Call - Check small mass on RF leg, p has been licking de. (Established Patient)

Allergies: No allergy information recorded

Subjective:
Complaints/HPI: Health concerns: O is concerned with a lump on P's back right leg (more on thigh area). O said he noticed it about a month ago and since then it has doubled in size and height. Within this past week, the O has noticed that the P has been licking and chewing at it and it has become really red. The O has not put anything topical on there and this is his first time getting it seen.

E/D wnl
C/S/V/D none
Heartworm: Heartguard
F&T: K9-Advantix
Vaccine Reactions: none
MC: verified

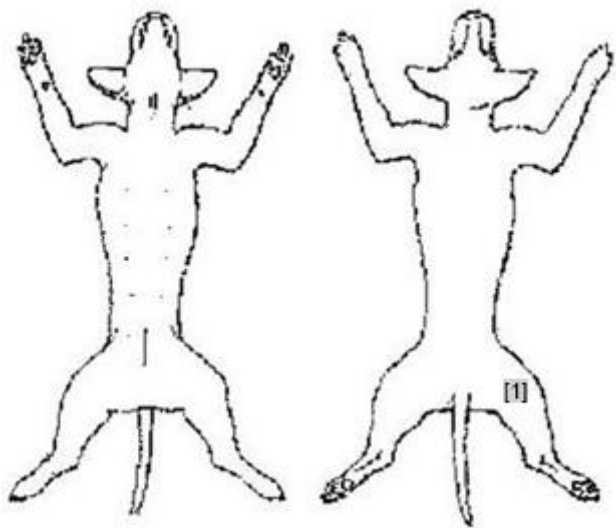

Diet: 2 cups of Purina Puppy chow BID
Meds: none

Objective:
Physical Exam (Male):
General Appearance: NORMAL - alert and appropriate; CRT < 2 sec; hydrated; responsive
Eyes: NORMAL - no inflammation; no redness; normal size and position
Ears: NORMAL - ears-clear
Nose: NORMAL - no nasal cavity abnormalities; no nasal discharge
Mouth: NORMAL - breath odor normal; MM pink; negative oral exam; no evidence of dental calculus
Pharynx: NOT PERFORMED
Head and Neck: NORMAL - within normal limits
Withers and Back: NORMAL - normal structure; no pain
Thorax: NORMAL - no abnormal findings for thorax
Lungs: NORMAL - lungs clear and eupneic
Heart: NORMAL - no murmur; NSR; strong synchronous pulses
Abdomen: NORMAL - no palpable organomegaly; no masses; non-painful; soft
Mammary Glands: NORMAL - no mammary gland discharge; normal size and consistency
Legs and Feet: NORMAL - no abnormal findings
Skin: ABNORMAL - good hair coat; no significant findings

WRIGHT-PATTERSON AFB VS
CHRONOLOGICAL RECORD OF MEDICAL CARE
Medical Record

Findings Associated with Image
[1] Other Abnormal Finding, Specify : Pelvic Thigh Right Top, (2.5cm diameter, ulcerated, hairless, raised dermal mass)

Male Genitalia: NORMAL - no discharge; no masses, cysts, or lesions; normal male genitalia
Anus and Rectum: NORMAL - no abnormal findings for anus/rectum
Locomotion: NORMAL - ambulatory x 4; gait normal; no evidence of lameness
Other Physical Exam (Male) Comments: patient did well while given vaccine with PEANUT BUTTER!

New Lab Results: 06 Dec 2021 Fine Needle Aspirate reviewed. Result: mainly degenerative neutrophils and eosinophils on a protein background. Ddx granuloma, foreign body, etc.

Assessment:
• Appears healthy

Healthy patient for vaccination.

Main concern today is the mass that has been growing on Berkley over the past several weeks to months. Berkley is chewing / licking at it. The mass has nearly doubled in size.

2.5cm diameter, ulcerated, hairless, raised dermal mass.
Owner agreed to cytology. Fine needle aspirate - mainly degenerative neutrophils and eosinophils on a protein background. Ddx granuloma, foreign body, etc. Would still recommend histopathology sendout and surgical removal for final diagnosis.

Discussed surgical removal and sendout via Antech vs JPC.

Plan:
Procedures/Services Performed:
• Sick-call Examination
• DAPv Vaccination Annual

Teaching/Counseling Text:
Because your pet was vaccinated today, you should monitor her/him closely over the next 24-48 hours. These vaccines sometimes cause adverse reactions. Normal reactions may include a decreased appetite, mild vomiting, and decreased activity. If you think your pet is experiencing a serious reaction (facial swelling, severe vomiting and diarrhea), contact a veterinarian immediately. If this occurs outside of our normal office hours, you may have to consult a civilian veterinarian.

Orders:
Labs: Fine Needle Aspirate

Follow-up:
No follow-up required.

Other Plans:

Patient Name: BERKLEY (CANINE)
Microchip #: 900215002774935
Owner Name: MORTENSEN,COLBY
Date: 06 Dec 2021 1330
Provider: CARTER,ARIANA M. / SIGNORINO,AMANDA LISA

WRIGHT-PATTERSON AFB VS
CHRONOLOGICAL RECORD OF MEDICAL CARE
Medical Record

Recommend surgical removal. Would require bloodwork (minimum PCV/TP, suggested CBC/Chem) prior to anesthesia.

Antech sendout approx. \$70 for histopathology readout
CBC / Chemistry approx. \$40
Cost of mass removal often depends on the size of the dog. Estimate is around \$150-\$200 as Berkley will need to be under general anesthesia for the mass removal.

We continually strive to improve the quality of the service we provide to you and your pets.
